DoD Electronic MALL (EMALL)

Overview

The DoD EMALL allows DoD and other federal customers to find and acquire off-the-shelf, finished good items from the commercial marketplace. The DoD EMALL offers cross catalog shopping for the purpose of comparison pricing and best value decision-making. The DoD EMALL is primarily composed of three corridors: parts and supplies, information technology, and training. It also provides a one-stop visibility of order status. The DoD EMALL runs on a distributed architecture that allows the vendor to maintain the data, ensuring that it is current and accurate. A large number of products are available from multiple vendors and eliminates the need for the Government to replicate data already maintained by the vendor. All vendors meet FAR and DFAR requirements. EMALL provides the benefits of reduced logistics response time and improved visibility of both Government and commercial sources of supply, as well as facilitates the use of the Government purchase card.

Capabilities

- Robust searching function with ability to search based on numerous key attributes (e.g., NSN, vendor part #, mfg #, vendor name, key word)
- Cross catalog shopping to allow for product comparisons based on price, delivery, characteristics
- Three different user profile registration option to provide users with varying shopping/searching capabilities
- Catalog punch out capability provides access to more catalogs
- Rules Engine in place to control/monitor purchasing based on service and agency business rules

EMALL supports the following **CSE capabilities**:
- Sourcing
- Receipt & Acceptance

System At A Glance	
Date of Inception	January 1999
Policy	OSD MID 905, Wynne Transition Memo
Deployment	FY99 DoD Authorization Act requiring single point of entry for DoD electronic catalog ordering capability on the internet
Executive Agent	Defense Logistics Agency (DLA)
Classification	Enterprise Capability
Governance	DPAP EMALL JRB

Milestones	
Oct 2004:	DPAP-EB designated as functional owner of DoD EMALL
Feb 2005:	V5.7 Release
January 2006:	Merged v6.0 and v6.1 Release (Involves consolidation of three separate EMALL server sites, website overhaul, and user interface enhancements and Improvements to DLA orders)
June 2006:	**Release of v6.2**
